Sm4 可逆证明

1901210447 刘嘉欣

1. 算法加密流程

其中:

$$X_{i+4} = F(X_i, X_{i+1}, X_{i+2}, X_{i+3}, rk_i)$$

= $X_i \oplus T(X_{i+1} \oplus X_{i+2} \oplus X_{i+3} \oplus rk_i)$

2. 算法解密流程

Sm4 算法的解密流程和加密流程是一样的,不同之处仅在于轮密钥的使用顺序,与加密时的顺序相反。

$$X_{j} = F(X_{j+4}, X_{j+3}, X_{j+2}, X_{j+1}, rk_{i})$$
$$= X_{j+4} \oplus T(X_{j+3} \oplus X_{j+2} \oplus X_{j+1} \oplus rk_{j}))$$

当 j=31 时:

$$X_{31} = F(X_{35}, X_{34}, X_{33}, X_{32}, rk_{31}) = X_{35} \oplus \top (X_{34} \oplus X_{33} \oplus X_{32} \oplus rk_{31}))$$

而在加密阶段,

$$X_{35} = F(X_{31}, X_{32}, X_{33}, X_{34}, rk_{31}) = X_{31} \oplus T(X_{32} \oplus X_{33} \oplus X_{34} \oplus rk_{31})$$

因此,解密阶段:

 $X_{31} \; = \; X_{31} \oplus \top (X_{32} \oplus X_{33} \oplus X_{34} \oplus rk_{31})) \oplus \top (X_{34} \oplus X_{33} \oplus X_{32} \oplus rk_{31})) = \; X_{31} \oplus \top (X_{32} \oplus x_{33} \oplus x_{34} \oplus x_{34} \oplus x_{34})) = \; X_{31} \oplus \top (X_{32} \oplus x_{33} \oplus x_{34} \oplus x_{34} \oplus x_{34})) = \; X_{31} \oplus \top (X_{32} \oplus x_{33} \oplus x_{34} \oplus x_{34} \oplus x_{34})) = \; X_{31} \oplus \top (X_{32} \oplus x_{34} \oplus x_{34} \oplus x_{34} \oplus x_{34})) = \; X_{31} \oplus \top (X_{32} \oplus x_{34} \oplus x_{34} \oplus x_{34} \oplus x_{34})) = \; X_{31} \oplus \top (X_{32} \oplus x_{34} \oplus x_{34} \oplus x_{34} \oplus x_{34})) = \; X_{31} \oplus (X_{32} \oplus x_{34} \oplus x_{34} \oplus x_{34}) = \; X_{32} \oplus x_{34} \oplus x_{34} \oplus x_{34} \oplus x_{34})$

由此可知, 在解密阶段一轮轮解密下来的 X 与加密阶段对应的 X 相同, 即:

$$(X_{35},X_{34},X_{33},X_{32}) -> (X_{34},X_{33},X_{32},X_{31}) -> \cdots -> (X_3,X_2,X_1,X_0)$$

将结果逆转后即可得明文 (X_0, X_1, X_2, X_3)
